***LETTER OF RECOMMENDATION***

To whom it may concern:

This is to recommend **Mr Demetris Demetriades**

Dear Sir/Madam,

I know Mr Demetriades **since March 2025** because he was student at the course of Physics of the Solid Earth that I teach in both the senior year and graduate students of the Physics Department of the National and Kapodistrian University of Athens. Mr Demetriades excelled in this course, achieving the highest grade of 10 (out of 10).

From this experience, I was led to the conclusion that Mr Demetriades is one of the best students (top 5%) in his year (there are about 200 students/year in my department). His interest in the course and his highly motivated questions made a very good impression on me. Mr Demetriades is hard-working with an excellent background in both mathematics and physics. He always works focused on the problem he must solve.

I strongly believe that Mr Demetriades will do his best to fit and benefit as a PhD student at your University.

Yours faithfully,

---

Dr Nicholas V. Sarlis
